DESCRIPTORS: *Germanium, Surface-active sub-
stances, *Indium, Indium alloys, *Semiconductors,
Halides, Antimony, Aluminum alloys, Gallium alloys

A report is given on a simple, readily reproducible
wetting process which is suitable for wetting germanium
at elevated temperatures with indium and its alloys. It
essentially consists in that the oxide films on the start-
ing materials are replaced by halide films and these
are then reduced in a hydrogen atmosphere at moder-
ately high temperatures. 'Pure' material surfaces are
thus obtained, at least at the moment of contact be-
(Physics--Solid State, TT, v. 10, no. 4) (over)
